---

Summary

Product designer with a Computer Science background and 1 year of experience at an **AI-native** startup, moving into a **Product Analyst** role. I turn **user research**, **customer feedback** and **competitor research** into clear **product recommendations**, working closely with **product and engineering teams**. Hands-on with **Generative AI / LLM applications**: I built an **AI-assisted prototype** with an **LLM classification pipeline**, **embeddings and semantic search**, and designed **agentic workflows** where **AI agents** flag and rank while people decide. I use **AI tools** like **ChatGPT** and **Claude** daily for **research, analysis, experimentation and prototyping**.

Experience

Hanyaa Auto Technologies | Hyderabad · Jan 2025 – Dec 2025

Junior UI/UX Designer| Jul 2025 – Dec 2025

- Took Tara, an **LLM-powered** life-admin app, from a one-line brief to CEO approval for build in 3 months by analysing **user requirements** from **10 interviews, 25+ surveys** and **15+ competitor products**.
- Translated **insights into clear product recommendations** (3 personas, 4 problem statements and 7 prioritised feature decisions), leading **requirement gathering** and **feature planning** for the MVP.
- Worked directly with the CEO and the **AI/ML and engineering teams** to turn complex **AI agent** behaviour (document reading, auto-filled reminders) into simple **product workflows** with human review.
- Defined **success metrics** for each feature and handed off specs and documentation to a 1–2 person engineering team in a **fast-paced** startup.

UI/UX Design Intern | Jan 2025 – Jun 2025

- Shaped the **product direction** for a new EV concept by **analysing user behaviour and requirements** from interviews, surveys and preference testing with Gen-Z and young urban commuters, and presented **product recommendations** to the CEO and **AI/ML team**.

- Turned raw research into **user needs, improvement opportunities and feature ideas**, framing the concept around a lightweight, practical and personalised experience.
- Ran **market and competitor research** on existing two-wheeler and EV products to find gaps the concept could fill.
- Supported **requirement gathering**, **workflow design** and early **prototyping** for products at an **AI-native** startup, working **cross-functionally with product and engineering teams**.
- **Used AI tools for research synthesis and quick prototypes, in a fast-paced environment with little structure.**

Projects

Reyo: AI save-and-retrieval tool for designers | Founder & Product Designer | 2025 – Present

- About: A **Generative AI** tool that saves useful moments from YouTube, Pinterest and websites, and brings them back while you design in Figma.
- My role: I ran **user research** (25 surveys, 5 interviews) and **competitor research** across **9 AI products**, defined the **product requirements**, designed the experience, and built an **AI-assisted prototype** using **LLM APIs**, **embeddings and semantic search**.
- Impact: Found that **84% of users** couldn't find saved content when they needed it, turned that into **7 prioritised product decisions**, and delivered a working MVP with automated **classification** over a 170+ video knowledge base.

Tara: AI life-admin assistant | Product Designer, Hanyaa | 2025

- About**:** An **LLM-powered** Android app that reads bills, policies and documents, spots deadlines, and reminds users before they're missed.
- My role**:** Sole designer. I analysed **user requirements** from **10 interviews, 25+ surveys** and **15+ competitor apps**, led **feature planning**, designed **human-in-the-loop AI workflows**, and worked with the **AI/ML and engineering teams** through handoff.
- Impact**:** Took it from a one-line brief to **CEO approval for build in 3 months**, with a clear MVP scope the team could build.

Shuchify: AI food hygiene platform | Product Designer (concept) | 2026

- About**: A B2B platform connecting restaurants, diners and food inspectors, using AI agents to verify kitchen hygiene every day.**
- My role**:** Analysed **2026 government inspection data** from 5 states and **20+ real customer complaints**, designed **agentic workflows** (6 AI agents with human decisions), and defined **product metrics and KPIs**.
- Impact**: Turned a nationwide gap (1 in 5 food samples failed safety tests) into a 3-sided product system, with check-ins designed to take about 2 minutes a day for restaurant owners.**.

Skills

Product & Analytics: Product Thinking, Requirement Gathering, Feature Planning, Prioritisation, Product Metrics & KPIs, Competitor Research, User Research, Customer Feedback Analysis, Workflow Design
AI & Technical: Generative AI / LLM applications, Agentic AI / AI agents, APIs and API integrations, Prompt Design, Embeddings & Semantic Search, AI-assisted Prototyping, SQL (basic), Postgres, Supabase, React, Next.js
AI Tools: ChatGPT, Claude, Figma Make, Emergent, Base44
Design: Figma, Wireframing, Prototyping, Design Systems, Usability, UX

Education

B.Tech in Computer Science and Engineering

Centurion University of Technology and Management | 2021–2025 | CGPA: 8.5/10

Certifications

10k Designers - Cohort 10 | Jan 2025 - Present

Industry product process: problem framing, user research and designing for business goals.
